

MICROSCREW

The Micro Screw range consists of self-tapping and metric standard screws along with metric threads according to customer specific applications. When the trend is to minimize the size and weight, these durable and small dimensioned screws provide the required competitive advantage where even the smallest gram and millimeter counts.

FEATURES & BENEFITS

- Diameter range of M 0.8 - M 2.6
- Lengths reaching up to 10x the thread diameter
- Capability of various thread heads
- Reliability with 50ppm
- Thread-forming of even the smallest components for direct assembly
- Cost effective as additional inserts and add-ons are redundant
- Time effective as cycle times are minimized in work-flow
- Assembly is possible in the smallest of installation spaces
- Available in plastic, light metal and steel materials for use in automated assembly

The Micro Screw is available as self-tapping, metric standard as well as customer-specific applications with metric threads.
